

AH-64D Apache

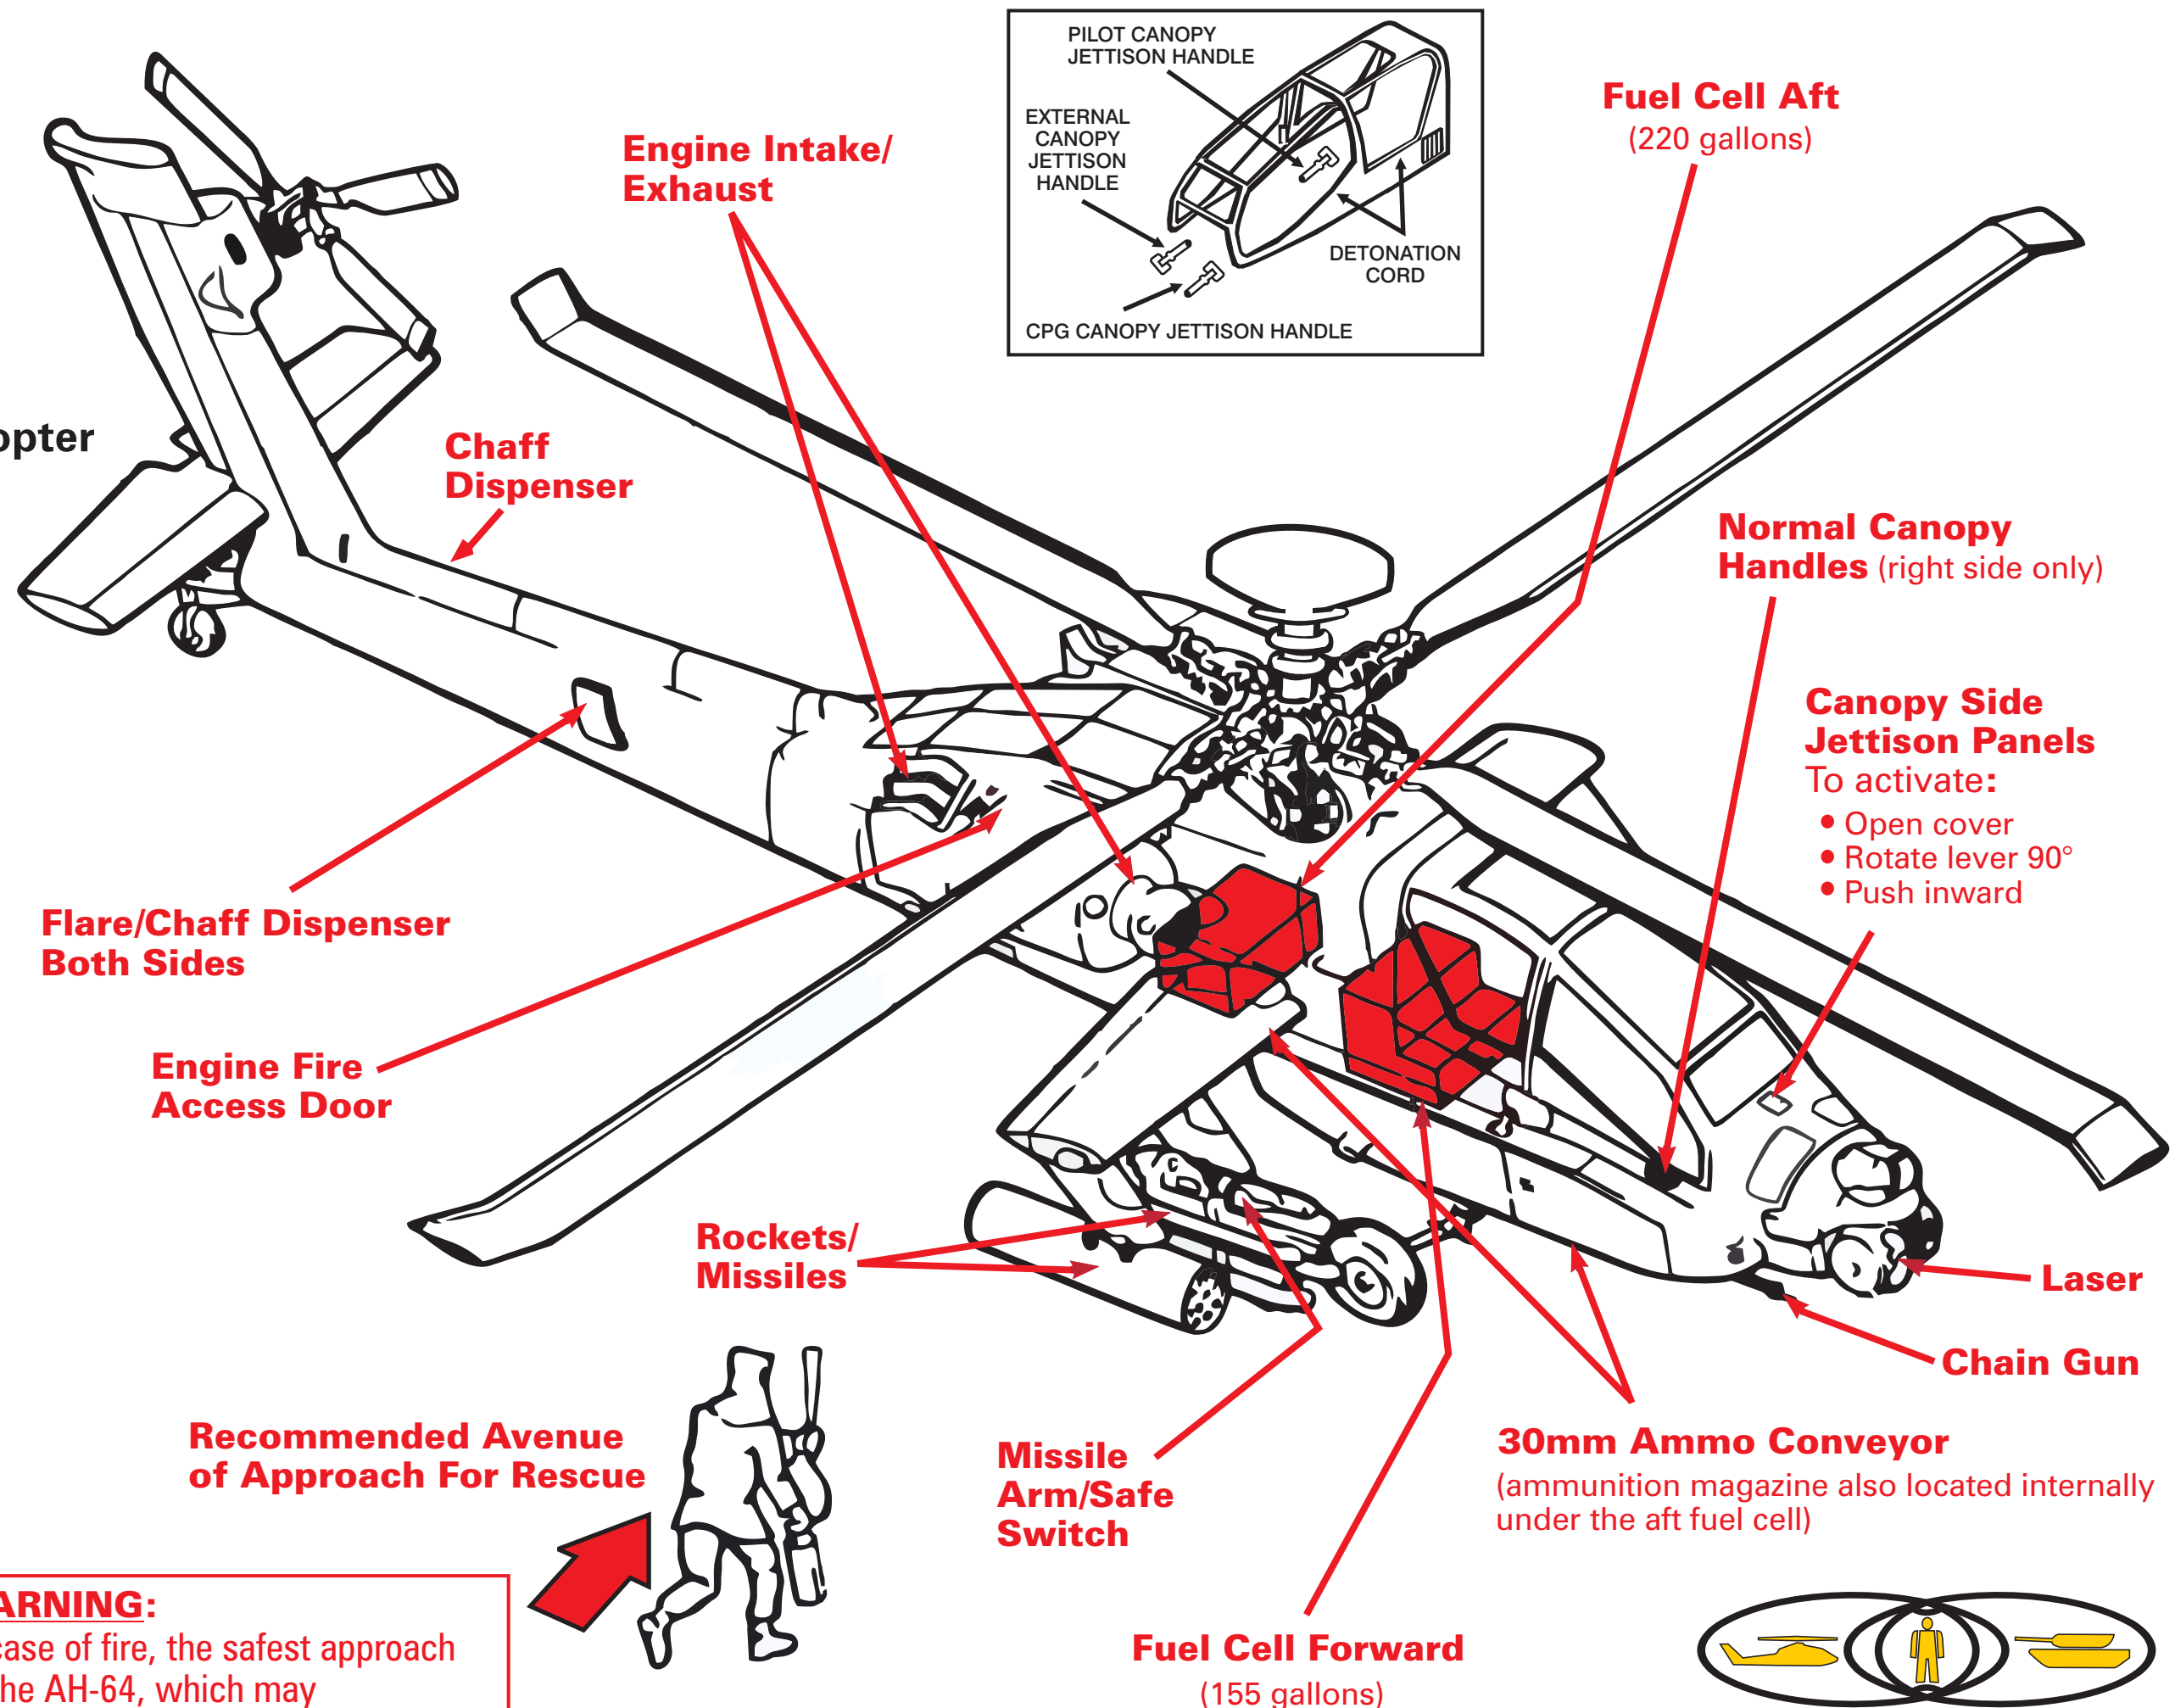

CRASH RESCUE

TYPE: Dual Engine Attack Helicopter
CREW: 2
PASSENGERS: 0
WEAPONS SYSTEM: Hellfire missiles, rockets, 30 millimeter chain gun

- To gain entrance to the cockpit area, both the pilot and copilot/gunner canopies open on the right side of the aircraft.

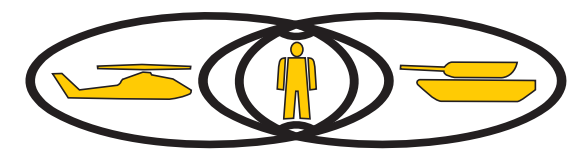

► **Caution** - The AH-64 is equipped with explosive charges in the canopy for emergency egress. It could be hazardous for ground crews if they are in the canopy fragment area when the systems are activated using either the internal or external canopy jettison handles. If the canopy fails to open, use the external canopy jettison system or break the canopy.

WARNING:
 In case of fire, the safest approach to the AH-64, which may be armed, is toward its side.
